

## Intelera Acquires Raleigh-Durham Based Heart Imaging Technologies, A Clinical Workflow Automation Leader

*Fourth acquisition within the last 12 months strengthens Intelera's position in medical image management and increases viewing capabilities and ROI for customers*

**Raleigh, NC and Montreal, Canada – July 8, 2021** — Today, [Intelera Medical Systems™](#), a global leader in medical image management solutions, announced its acquisition of [Heart Imaging Technologies](#) (HeartIT), the leader in clinical workflow automation. Headquartered in the Raleigh-Durham area, HeartIT provides web-based medical image management technology and services to health systems, large hospitals and private clinics, as well as drug and device companies sponsoring multi-center clinical trials. The acquisition will significantly expand Intelera's ability to provide enterprise imaging and insights while also deepening cardiovascular expertise.

Founded in 2000, HeartIT has been developing innovative medical image viewing and reporting software for more than two decades. Today, the company provides secure web browser access to over one billion medical images. Most notably, the company was [one of the first to offer an FDA-cleared zero footprint medical image workstation](#), setting the precedent for others seeking approval.

"The challenges healthcare providers were facing prior to the pandemic are now even more critical, and technology is key to overcoming them," said Mike Lipps, Intelera President & Chief Executive Officer. "Our goal at Intelera is to improve efficiency, productivity, and the user experience for providers. By partnering with HeartIT, we're enabling our customers to tap into advanced visualization and reporting capabilities while increasing ROI and improving patient outcomes."

In February, [Intelera announced its acquisition of LUMEDX](#), a leading provider of healthcare analytics and cardiovascular information systems, which was preceded by the [Digisonics acquisition](#) in December 2020. The addition of HeartIT further supports Intelera's journey to provide software solutions that seamlessly manage medical images, workflows, and data, and ultimately help improve patient care. "We are thrilled to welcome HeartIT and are excited about Intelera's continued expansion on their path to being the global leader in medical image management," said Jean-Baptiste Brian, Intelera board member and Partner at HG.

"HeartIT spent over 20 years developing and improving software that allows a bare bones web browser to display diagnostic-quality medical images quickly and conveniently, including overcoming the technical challenges associated with simultaneously displaying multi-modality movies of the beating human heart side-by-side," said Robert Judd, Ph.D, President of HeartIT. "Our commitment to overcoming these technical challenges has improved physician workflows and enabled us to continue to grow and reach new heights. We're thrilled to join forces with Intelera as we seek to integrate our technologies and provide a broader depth of enterprise imaging and analytics capabilities."

Currently, Intelera staffs nearly 60 employees in the Raleigh area. Today, the company is aggressively hiring across all divisions, and further plans to expand its Raleigh presence by opening an office space in the fall.
