

## **Inteleraad integrates Augnito Voice Recognition to provide clients with cloud-based alternative for InSight PACS reporting.**

Augnito Voice Services™ will integrate with Inteleraad's InSight PACS reporting, equipping clients with accessible, advanced speech recognition technology that simplifies patient care.

This new integration partnership will provide Inteleraad clients with increased voice recognition options, giving them access to a pioneering, cloud-based product that helps ensure clients are not limited to one voice recognition platform and the risks associated with that dependence.

Inteleraad Cloud is a menu of expertly cloud-engineered solutions designed to optimise the benefits of Cloud technology and scalability potential without sacrificing the performance of onsite architecture. Proudly vendor-neutral, Inteleraad, is integrating its products with multiple technologies which fit with its cloud-based strategy, [Augnito](#) being the most recent. These can assist with the Cloud First strategy by utilising the Cloud for disaster recovery, image exchange and long-term archiving, and this latest addition is another way Inteleraad is providing the latest cloud innovations and future resilience required by its clients.

Augnito can be used with a speech microphone or even through an app on a smartphone, making it faster and easier for radiologists and clinicians to diagnose critical conditions where every second counts, leading to better outcomes for patients.

Shiraz Austin, Managing Director at Scribetech (UK) Ltd and Co-Founder of Augnito stated, "Inteleraad is a best-in-class provider of medical imaging software with a mission statement that dovetails very well into our own - where technology is developed to impact healthcare in a positive way and where making more time for patient care is paramount. Our partnership agreement solidifies the solution strategies of both organisations, and we're excited that our secure, cloud-based, voice-powered AI speech recognition technology, Augnito, will play an important role in achieving this. Through the use of Augnito technology, Inteleraad can empower radiologists to deliver reporting when and where it's needed to keep the patient journey and clinical workflows moving."

Inteleraad is exploring integrating Augnito into other products in its portfolio, Arron Edwards, Managing Director of Inteleraad, commented, "Inteleraad is excited to be able to add the class-leading, cloud-based speech engine from Augnito into our fully featured rich reporting solution, which is built into InSight PACS. Our UK engineering team have worked hand-in-hand with the Augnito engineering team at Scribetech, leading to an incredibly successful integration which will ensure that we can continue to offer a best-in-class solution for our clients."

Inteleraad welcomes contact from PRs and journalists for quotes, expert opinions or bespoke content for particular press articles. Please contact Clare Dawe in the first instance at [clare.dawe@intelerad.com](mailto:clare.dawe@intelerad.com)

## **ABOUT SCRIBETECH AND THE AUGNITO SOLUTION**

Augnito is a secure, cloud-based, AI-driven clinical speech recognition product suite. It offers fast, easy ways to capture live clinical data on any device with 99.3% accuracy, support for multiple medical specialties, and no need for voice profile training. Augnito brings seamless speech recognition to daily workflows and third-party clinical systems, turning medical information into clinical documentation and making healthcare intelligence securely accessible wherever it's needed. Augnito was co-developed by Scribetechnology, a clinical voice solutions innovator, fusing 20 years of transcription and digital dictation services to the NHS, speech-to-text, and clinical coding solutions for the healthcare sector, and its own speech recognition engine with advanced voice AI technology.
