

Intelera to Reveal Product Enhancements at RSNA, Unifying Imaging Data Across Health Systems

Updates to signature products including Clario SmartWorklist and Intelera Cloud, combined with enhancements to AI-compatible solutions, underscores the company's commitment to interoperability

Raleigh, NC – Nov. 14, 2023 – At the [2023 Radiological Society of North America \(RSNA\) Annual Meeting](#) in Chicago on Nov. 26-30, [Intelera Medical Systems™](#), a global leader in medical imaging software solutions, is encouraging attendees to “see the big picture.” The company’s focus at the show, and heading into 2024, is on unifying systems across the enterprise imaging ecosystem through product roadmap enhancements, thus enabling a more comprehensive imaging strategy for clients worldwide.

Prompted by market and client feedback that emphasized a need for solutions that touch multiple aspects of healthcare technology stacks for hospitals and healthcare systems, Intelera responded to industry demand by amplifying its commitment to holistic access throughout the patient care continuum by expanding its EHR integration offerings. Utilizing new enhancements in the company’s enterprise imaging solutions, clients have a “one-stop shop” at their fingertips, allowing them to view a patient’s entire history and relevant data, which can be shared with referring physicians, patients and other image exchange providers.

As part of the ongoing efforts to seamlessly connect their product lines, Intelera is also focused on unifying the Life Image and Ambra platforms to enhance access to the world’s largest image exchange network, created last year with Intelera’s acquisition of Life Image. Life Image clients will be able to natively connect with Ambra clients and vice versa, offering a smooth, uninterrupted exchange experience that encourages true collaboration and optimal patient outcomes.

Intelera will also offer RSNA attendees a more in-depth look at its AI-enhanced solutions, which offer the best of both worlds – access to regulatory-approved AI algorithms and the freedom and flexibility to choose an AI vendor without being concerned about compatibility. Intelera vendor-neutral solutions provide clients with workflow-complimentary access to a wide and growing range of advanced AI algorithms.

Intelera's solutions integrate and interface seamlessly with clients' preferred AI solutions. For example, Clario SmartWorklist can now intelligently drive which cases should be sent to AI Platform based on defined criterion. Following recent enhancements, customers can also more easily define how AI results will impact the worklist prioritization.

Intelera’s newly enhanced streaming capabilities will also be on display at its RSNA booth # 6104. Clients can now stream images from the Intelera Cloud Long-term Archive at speeds comparable to those from on-premise PACS. Organizations get the superior scalability, security

and cost-savings synonymous with cloud and paired with the fastest streaming available, eliminating the need to choose one set of benefits over the other.

"Intelrad's platform is the backbone of our clients' imaging strategies, and at RSNA 2023, we'll share more about our ongoing efforts to unify our solutions, connecting with EHRs throughout the ecosystem and expediting the delivery of improved patient care," [Intelrad](#) President [Morris Panner](#) said. "We look forward to connecting with colleagues and peers to discuss product innovation, medical imaging developments and initiatives for improving the overall patient experience."
