PenLung
Low Dose Computed Tomography (LDCT) Lung Screening Management System

PenLung offers a comprehensive patient tracking solution through the journey of care for Imaging Centers, Clinics, and Hospitals that perform general lung screening. PenLung is a cloud based solution where all data is securely transmitted in compliance with HIPAA regulations.

With PenLung you can:

- Manage, track, and correspond with patients participating in LDCT lung cancer screening programs
- Generate uploads to the Lung Cancer Screening Registry for ACR accreditation

PenLung's Intelligent Tracking includes:

- Tracking of unresolved cases to resolution
- Patient intake form – Captures the key registry items
- Patient Correspondence – Easy to generate printed or emailed letters:
  - Exam result letters
  - Patient reminder letters for next exam
  - Custom letters
- ACR Lung-RADS compliant
- Pathology and cancer staging
- Incidental findings tracking
- LDAP integration
- Offered as an on-premise or cloud hosted solution

Benefits

Increase Productivity

Track, record, and plan your patient's journey outside of your Imaging Department:

- Seamlessly capture patient history with PenLung's easy-to-use lung history form
- Quickly reference, follow up, and track your patient's journey within the Lung Navigator form, where all procedures are recorded

Consolidate Data

PenLung easily integrates with external systems to bring in existing pathology results in addition to offering the functionality to document directly within the system.

Reports can be generated and uploaded to the Lung Cancer Screening Registry.
