# Optimize Your Workflows with AI

Harness the power of Artificial Intelligence to improve workflows and early detection

Through Intelerad's partnership with Blackford Analysis, Intelerad customers can leverage the power of AI to deliver more accurate diagnoses and treatment plans, mine and analyze valuable patient data, and improve workflows.

Blackford offers 150 AI applications to improve radiologist workflows, including:

- **Qure.ai qER:** Brain CT bleeding, skull fractures, mass effect, midline shift evaluation, and ICH bleed detection to allow for worklist prioritization.

- **Qure.ai qXR:** Automatic chest x-ray evaluation for worklist prioritization.

- **VIDA Insights:** Automated analysis of chest CT scans to produce quantified lung measures for more precise diagnoses.

- **Riverain ClearRead CT:** Tools designed to aid in detecting pulmonary nodules during CT chest review for accurate and more efficient reads.

The Intelerad + Blackford Advantage

Through Intelerad's partnership with Blackford, healthcare providers can seamlessly integrate AI solutions into their existing platforms. Blackford's applications help improve reading speed and accuracy and automatically route studies through the relevant AI algorithms and applications, flagging urgent studies for immediate review.
