

Intelerad Enterprise Imaging and Informatics Suite

Centralize patient data, improve outcomes, achieve interoperability

The Intelerad Enterprise Imaging and Informatics Suite is a comprehensive set of offerings enabling healthcare providers to manage and share vital patient data across the organization. From image management to workflows to reporting and analytics, the Suite aims to reduce costs, time, and workload while improving patient outcomes.

A Simplified Approach to Enterprise Imaging

ANALYZE

Clario SmartWorklist is a vendor-neutral worklist that provides a single source for managing all imaging, workflow, and patient data across the enterprise.

IntelePACS is a comprehensive PACS solution that ensures the integrity of radiology image and patient data, while providing access to electronic images at any time, from any location, and for any case.

Enterprise VNA is a vendor-neutral, cloud-enabled, and scalable archive that centralizes data for highly-efficient imaging and reports access to help drive better patient care.

Ambra Image Exchange is a robust solution for securely sending and receiving patient data across geographies to promote collaboration among healthcare professionals and simplify patient access. [2022's No. 1 Best in KLAS winner.](#)

Life Sciences Suite optimizes image intake, AI-driven anonymization, and quality control for research workflows, customized for the specific image management requirements of clinical research, pharmaceutical, and medical device organizations.

Cardiovascular Suite is a feature-rich Cardiovascular Information Systems (CVIS) that supports registries, structured reporting, and analytics that integrate with electronic health records, and patient and referring physician portals.

OB/GYN Suite is a powerful, vendor-neutral OB solution to manage images, reporting, and workflows.

CLARIO SMARTWORKLIST

Benefits

- Centralize outstanding worklist priorities across the enterprise
- Increase radiologists' productivity with auto-next reading mode
- Tailor a worklist and assign studies based on the radiologists' work schedules and sub-specialties

Key features

- Vendor-neutral workflow management
- Native and third-party Artificial Intelligence
- Seamless access to images across the enterprise

INTELEPACS

Benefits

- Improve workflow efficiency and quality of care
- Access patient records across disparate databases
- Improve collaboration between specialties and sites

Key features

- High performing, scalable PACS
- Cross-enterprise diagnostic imaging platform
- Intuitive and powerful universal diagnostic viewer

INTELERAD VNA

Benefits

- Centralize access to patient data regardless of vendor
- Highly scalable storage customization
- Maintain consistency and reliability by syncing data corrections and deletions

Key features

- Interoperability between disparate systems
- Image Lifecycle Management
- Image Object Change Management

AMBRA IMAGE EXCHANGE

Benefits

- Improve interoperability between providers and sites
- Enhance productivity and receive imaging in real time
- Expand patient reach by accepting imaging from out-of-network facilities

Key features

- Cloud-based image sharing
- Anonymization of patient data
- Workflow automation

LIFE SCIENCES

Benefits

- Enable collaboration through individualized access
- Supply researchers with centralized data from disparate geographies
- Automate anonymization and quality control workflows

Key features

- Manual and automatic anonymization of data
- Multi-intake DICOM ingestion solutions
- Unified data organization and automated image exchange

CARDIOVASCULAR SUITE

Benefits

- Improve data quality and streamline data collection
- Rapidly access reports via a centralized repository
- Transform data into actionable reports

Key features

- Cardiovascular registries
- Structured reporting and powerful analytics
- Precession, a web-enabled, vendor-neutral cardiac solution

OB/GYN SUITE

Benefits

- Automate workflows, eliminating manual entry time and reducing errors
- Ensure interoperability and seamless interface with third-party systems
- Create professional, consistent documents that meet reporting requirements

Key features

- Advanced, vendor-neutral image handling with real-time display
- Structured reporting and analysis of OB/GYN studies
- Professional documentation and database storage
