# Structured Reporting

Team-based documentation improves data quality and efficiency while providing better patient care

Using structured reporting, healthcare organizations can more easily and accurately collect and analyze patient data, meet documentation and reporting requirements, and improve overall quality of care. Intelerad's structured reporting solutions allow users to quickly create natural language reports, improving turnaround time while increasing accuracy.

The process of structured reporting

By using a consistent format, the entire team of caregivers inputs data at the point of care. The data is collected once and integrated directly into the workflow, reducing workload while improving accuracy. The information allows providers to:

- Monitor and measure progress with easy-to-read charts and graphs
- Make data-driven decisions that improve clinical and operational outcomes
- Simplify the reporting process so clinicians can focus on results rather than data entry

Intelerad.

CONNECT

Enter data from the entire team of caregivers in a consistent format, at the point of care.

CLARIFY

Improve clarity and quality through disease-specific report templates, using a common vocabulary across care providers.

COMMUNICATE

Aggregate and distribute standardized data to care providers across multi-disciplinary teams.

ANALYZE

Promote evidence-based medicine resulting in structured data that can be mined and analyzed at the organizational level for valuable insights.

Intelerad's structured reporting solutions give healthcare organizations robust, vendor-neutral, standards-based reports. Quickly and easily create natural language reports, improving turnaround time while increasing accuracy.
