

InteleOne™

Connect patients, providers, and information across the enterprise to enable community-wide, coordinated care

InteleOne™ is a cross-enterprise diagnostic imaging platform that seamlessly integrates the HIS, RIS, EMR, PACS, and VNA systems that you work with locally, regionally, or across the country, providing radiologists with a single, unified environment that enables highly productive reading and reporting.

UNIFIED WORKFLOW

- Connect your entire subspecialist and referring network, 24x7
- Efficient on-site and remote reading and reporting eliminate preliminary reads and extend subspecialty or after-hours coverage
- Gain access to the patient's complete imaging history
- Deliver final reports or critical results in real-time to referrers on smartphones or tablets

ENTERPRISE INTEROPERABILITY

- Easily manage heterogeneous sites and systems (VNA, EMR, HIS, RIS) to integrate applications and data into one unified workflow
- Automate pre-fetching from any current or legacy archive to create a unified worklist across disparate systems
- Improve efficiency and reduce learning curves typically associated with an enterprise diagnostic environment

INTELLIGENT SCALING

- Leverage your existing infrastructure by choosing between progressive or aggressive IT replacement strategies
- Integrate new facilities across the enterprise, quickly and easily, without impacting end-users, existing reading workflows, or business continuity
- Intelligently manage multiple Service-Level Agreements (SLAs) across different client organizations

KEY FEATURES

IntelOne™ leverages a unified worklist, universal enterprise viewer, and integrated reporting environment to drive the best patient care.

State-of-the-art, web-enabled diagnostic viewer that is ideal for a variety of healthcare environments, from physicians to radiologists to sub-specialty caregivers.

Enhance workflow for sites with limited capabilities by leveraging server-side streaming, performing in suboptimal conditions, and generating orders “on the fly” from DICOM images, auto-populating worklists.

Fully integrated subspecialty reading including orthopedics, mammography/digital breast tomosynthesis, PET/CT fusion, and more.

Unify all cases into a single reading solution with automated case distribution, pre-fetching, workflow orchestration, and workload balancing.

An alternative to replacing critical and costly systems, IntelOne™ allows you to breathe new life into your existing infrastructure by providing flexible deployment strategies and migration alternatives that are tailored to meet your business and timing needs.
